

# The Zeitgeist Theory of Awesome

*A theory that changes everything*

Clarity emerges from chaos. A fervid, sweating dream vision. The scribbled notes at the bedside, writ large during the devil's hour. But with morning, with the dream still swirling around my thoughts, came clarity. No. An epiphany.

ZTOA. The Theory to replace all theories. A theory that fully describes the Universe (the big U, not the little u). A theory that is fully testable.

ZTOA is not the unsatisfactory descriptive theory of the Standard Model. Nor the many interpretations theory of the enigmatic Quantum Dynamics. Nor even General Relativity, even though GR is 'deeper' in some sense.

Ask these questions. What is Mass, or Space, or Time? Entanglement of what? Why the singular event we call the Big Bang. How does consciousness play into things? Is all life conscious? Does free will exist? What is life for that matter? Is it only some decoherence measurement machine?

Why is there Something rather than Nothing?

So let me detail ZTOA. Imagine a sphere 46 Gly in radius. But assume Space does not exist. That is, lengths as we measure 3 orthogonal dimensions is meaningless. Gobble gobble

By securing funding to finance the construction and operation of the Universal Touring Machine, ZTOA may be fully validate and vindicated. Yes the UTM is very expensive, but at the end of the day, a new Universe will be opened for all of us.
